parmartulsi222@gmail.com https://github.com/tulsi-parmar1

Motivated and detail-oriented web developer with a strong foundation in full-stack development using the MERN stack (MongoDB, Express.js, React.js, and Node.js). Skilled in building dynamic, responsive web applications and experienced in working on real-world projects. Seeking opportunities to apply and further develop my technical expertise in web development.

SKILLS

Frontend : HTML,CSS , Javascript , React.Js**.**
Backend:NodeJs,ExpressJs.
Database:SQL,MongoDb.
Version Control:Git & GitHub

PROJECTS

1. **HireHub – Job-Seeking Web Application.**
   Developed a full-stack job-seeking platform using the **MERN** stack, offering a comprehensive solution for both job seekers and employers. Key features include:
   - Users can create and update detailed profiles, including personal information, experience, and skills.
   - Employers can post jobs with specific requirements and descriptions.
   - Integrated job search functionality with filters for industry, location, and job type
   - Job seekers can easily apply for positions directly through the platform.
   - Integrated interactive elements like smooth scrolling, animations using **GSAP**.

2. **Expense Tracker – React Application.**
   Developed an expense tracking application using React, designed to help users manage their finances
   - Users can add expenses with detailed descriptions, including the name of the expense, amount, and category (income or Outcome).
   - The application automatically calculates and displays the total balance, showing the sum of all income and expenses.

3. **Quiz App – React Application.**
   Created a dynamic quiz application using React, featuring an engaging and visually appealing user interface. Key features include:
   - Users can take quizzes , receiving immediate feedback on their answers.
   - Provides detailed results for each quiz, including correct answers, incorrect answers, and skipped questions.
